

## WILD WATERS: SONAR-CITIES LECTURE SERIES

### A participatory research-action to prepare for disasters and health emergencies in Europe's cities

On Tuesday, **April 22<sup>nd</sup>, 2025, at 4.20 pm**, we will host a seminar with **Tamara Giles-Vernick** from the Institut Pasteur from France. The event, which is part of the *Wild Waters* lecture series within the international research project Sonar-Cities, will take place in the lecture hall **P1**.

With **Tamara Giles-Vernick**, we will discuss the **Sonar-Cities** project, which develops socially inclusive responses to health emergencies and disasters caused by climate change in urban settings. We will also explore how emergencies can disrupt and completely transform research-action plans, raising questions about the politics of such research approaches.

**Tamara Giles-Vernick**, Sonar-Cities' project leader, currently conducts research at the interstices of medical anthropology and ethnohistory (historical research using anthropological tools), investigating infectious disease transmission and global health interventions in Africa.

The discussion will be held in English, but it will also be available via Zoom.

Warmly welcome!
